

# List of Possible Semiquest Trade Secrets

Technology Area	Know How & Trade Secrets
Polymeric Elements	Polymeric composition of elements Vendor description, stock or part number, price information and order quantity of polymers used in elements Vendor CoA, mechanical property information and processing information on polymers used in polymeric elements Internal and external characterization test results on polymeric elements Internal and external test methods used to characterize polymeric elements Polymeric elements designs or drawings Die designs or drawings used in the generation of polymeric elements Vendor, equipment and location used to form, clean and package the polymeric elements Equipment set up and run conditions required to form, clean and package the polymeric elements Standard operating procedures, training manuals, photographs or manufacturing aids associated with element manufacturing Quality tests methods, equipment used and data generated from the tests to release polymeric elements to pad assembly Unit pricing on finished polymeric elements
Slurry Distribution Foams (SDF's)	Vendor description, stock or part number, price information and order quantity of SDF's Vendor CoA, mechanical property information and processing information on the SDF's Internal and external characterization test results on the SDF's Internal and external test methods used to characterize the SDF's SDF designs or drawings Vendor, equipment and location used to form, clean and package the SDF's Equipment set up and run conditions required to form, clean and package the SDF's Standard operating procedures, training manuals, photographs or manufacturing aids associated with SDF manufacturing Quality tests methods, equipment used and data generated from the tests to release the SDF's to pad assembly Unit pricing on finished slurry distribution foams
Guideplates (1 piece or 2 piece)	Vendor description, stock or part number, price information and order quantity of guideplates Vendor CoA, mechanical property information and processing information on the guideplates and components Internal and external characterization test results on the guideplates and components Internal and external test methods used to characterize the guideplates and components Guideplate and component designs or drawings Vendor, equipment and location used to form, clean and package the guideplates and components Equipment set up and run conditions required to form, clean and package the guideplates and components Standard operating procedures, training manuals, photographs or manufacturing aids associated with guideplate manufacturing Quality tests methods, equipment used and data generated from the tests to release the guideplates and components to pad assembly Unit pricing on finished guideplates
Compliant Backing Foams	Vendor description, stock or part number, price information and order quantity of compliant backing foams Vendor CoA, mechanical property information and processing information on the compliant backing foams Internal and external characterization test results on the compliant backing foams Internal and external test methods used to characterize the compliant backing foams Compliant backing foam designs or drawings Vendor, equipment and location used to form, clean and package the compliant backing foams Equipment set up and run conditions required to form, clean and package the compliant backing foams Standard operating procedures, training manuals, photographs or manufacturing aids associated with compliant backing foam manufacturing Quality tests methods, equipment used and data generated from the tests to release the compliant backing foams to pad assembly Unit pricing on finished compliant foam backings
Assembly Adhesives	Vendor description, stock or part number, price information and order quantity of assembly adhesives Vendor CoA, mechanical property information and processing information on the assembly adhesives Internal and external characterization test results on the assembly adhesives Internal and external test methods used to characterize the assembly adhesives Assembly adhesive designs or drawings Vendor, equipment and location used to form, clean and package the assembly adhesives
